Power station generator large

Overview

What is a portable power station?

A solar generator is a portable power station that supports solar panel input. They are often used interchangeably, but not all power stations come with solar panels. How long does a portable power station last during an outage?

Run time depends on capacity and load.

What is the difference between a generator and a portable power station?

A portable power station is essentially a big rechargeable battery that you carry around. Deplete it, and it's useless until you can recharge. A generator, by definition, is a device that actually converts some type of energy to usable electricity in whatever circuitry you have it connected to.

What is the difference between a power station and a solar generator?

A portable power station is a battery-powered device that stores energy and provides AC and DC output. A solar generator is essentially the same thing, but includes or supports solar panels for off-grid recharging. Note: Not all power stations are solar generators, but all solar generators are power stations with solar capability.

How much does a portable power station weigh?

Faster charging is especially useful if you're cycling power usage throughout the day or topping off before a storm hits. Not all portable power stations are truly "portable." Some weigh over 100 pounds, especially expandable or high-capacity systems. For RV trips or apartment use, a compact, under-50 lb model may be more manageable.
