Power storage and operation and maintenance

Overview

Can energy storage technology be used in power systems?

With the advancement of new energy storage technologies, e.g. chemical batteries and flywheels, in recent years, they have been applied in power systems and their total installed capacity is increasing very fast. The large-scale development of REG and the application of new ESSs in power systems are the two backgrounds of this book.

What is pumped hydroelectric storage (PHS)?

In order to cope with the challenges brought by the large-scale REG integration to the planning and operation of power systems, the deployment of energy storage system (ESS) has become an important and even essential solution. At present, pumped hydroelectric storage (PHS) is the largest and most mature energy storage type applied in power systems.

How to control and maintain electrochemical storage facilities?

Another essential factor for the optimum control and maintenance of electrochemical storage facilities is to provide the plant with a system for processing and interpreting data, issuing reports and managing alarms, both for the technical teams in charge and for customers.
