# **Power tool solar container lithium battery is fully charged**

## Overview

---

How to store lithium power tool batteries?

When storing lithium power tool batteries, follow these specific tips: Ideal Charge Level: Keep the charge level at around 30-40% when storing lithium batteries. This charge range is optimal for long-term storage. Avoid Freezing: Do not store lithium batteries in freezing temperatures, as cold can cause damage and reduce battery effectiveness.

Should power tool batteries be fully charged?

No, power tool batteries should not be stored fully charged. For lithium-ion batteries, it's best to store them at about 30-40% charge to prevent capacity loss and avoid deep discharge. Is it bad to leave power tool batteries on the charger?

Can you leave power tool batteries on a charger?

Yes, leaving power tool batteries on the charger for extended periods can lead to overcharging and reduce their lifespan. It's recommended to remove them from the charger once fully charged. How should you store power tools when not in use?

What is the optimal charge level for storing lithium-ion batteries?

The optimal charge level for storing lithium-ion batteries is between 40% and 60%. While it may seem counterintuitive, storing a lithium battery at full charge (100%) or fully discharged (0%) can cause stress and accelerate the degradation of the battery cells.
