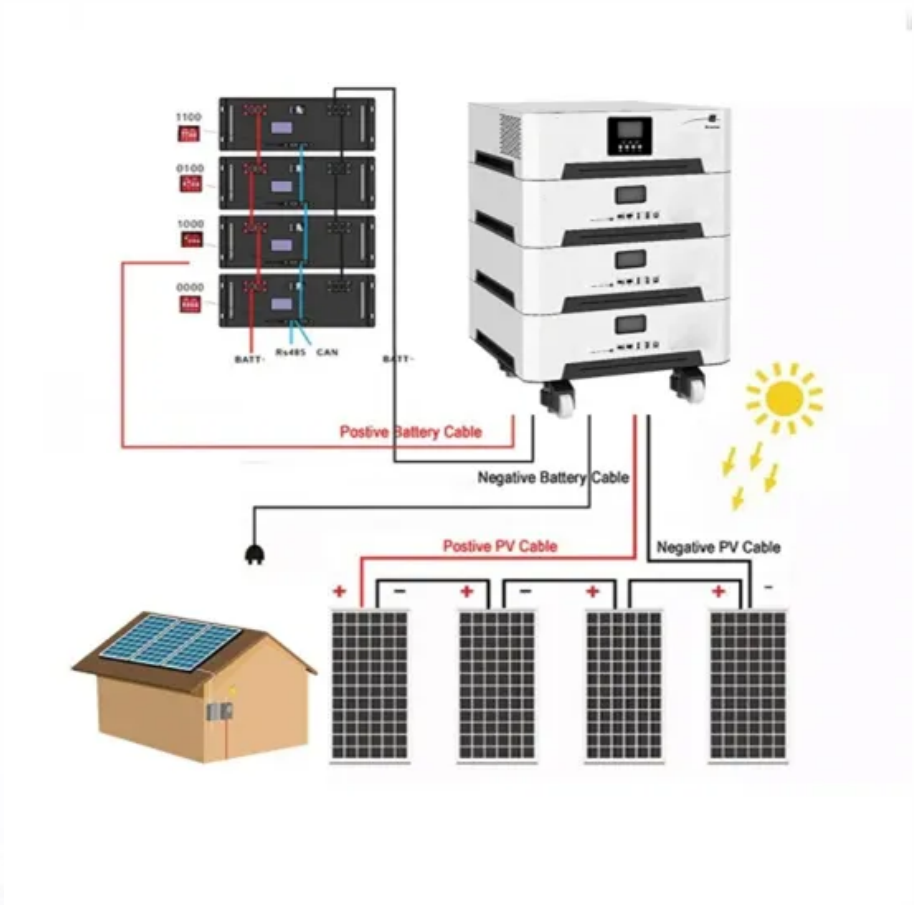
Pressure Energy Storage Power Station



Overview

In the context of achieving the dual carbon goal, pumped storage technology has been given high hopes. Small and medium-sized pumped storage power stations have flexible site selection, do not involve ecologi.

Why are small and medium-sized pumped storage power stations important?

Small and medium-sized pumped storage power stations have unique development advantages, and the development and construction of small and medium-sized pumped storage power stations have important practical significance for optimizing the energy structure of Zhejiang Province.

Should pumped storage power stations be planned according to local conditions?

In 2021, the National Energy Administration made it clear in the Medium and Long Term Development Plan for Pumped Storage (2021–2035) that the construction of small and medium-sized pumped storage power stations should be planned according to local conditions in provinces with better resources.

How pumped power station control energy storage and discharge?

The medium and small pumped storage power station can control energy storage and discharge by adjusting the difference of water level in the reservoir. Therefore, the optimized control scheme is of great significance to improve the energy storage efficiency of the power station.

How pumped storage power station can reduce the cost?

Therefore, on the basis of conventional small hydropower, the transformation into a small pumped storage power station or joint operation with pumped storage can reduce the cost, shorten the construction period, solve the problem of site selection, improve the power station output in the dry season, and increase the economic benefits.
