## Overview

How much does a solar panel cost per m<sup>2</sup>?

Global cost per m<sup>2</sup> in 2025 varied immensely across regions because of labor, logistics, and policy support. In the United States, a typical solar panel cost per square meter in residential installations is between \$280-\$320 per m<sup>2</sup> because labor and permission expenses are higher.

How much does a 30m<sup>2</sup> solar PV system cost?

A residential property in an urban region of South Africa installs a 30m<sup>2</sup> solar PV system featuring mid-range monocrystalline panels. The solar panel cost per square meter, including all labor and system components, is approximately \$6,000.

Do ground-mounted solar panels cost more?

Generally, ground-mounted solar panels will cost more to install than an equally sized roof-mounted system. This is partly due to the structure on which the solar panels are installed. A rooftop system is supported by the roof, and the building's structure, meaning erecting a supporting structure is unnecessary.

How do I determine the cost of a ground-mount solar system?

The best way to determine the cost of your ground-mount solar system is to request a free custom quote. With a custom quote, you'll see the complete installation cost, all available incentives, and the payback and ROI. Not ready for a quote?
