Principle of unmanned base station communication system

Overview

How can a base station be used in wireless communications?

I. INTRODUCTION The rapid development of the technology of unmanned aerial vehicles (UAVs) has spawned a myriad of use cases in wireless communications. One of the most prominent application scenarios involves mounting base stations on board UAVs to provide connectivity in areas where it is in-sufficient or absent.

Can Aerial Base stations be deployed on board unmanned aerial vehicles (UAVs)?

Abstract—The deployment of Aerial Base Stations (ABSs) mounted on board Unmanned Aerial Vehicles (UAVs) is emerging as a promising technology to provide connectivity in areas where terrestrial infrastructure is insufficient or absent.

What is a Wireless Communication transmission system for a UAV?

3.1. Implementation of a wireless communication transmission system for UAV based on transmission antenna at the tail of the UAV. The signal transmitted by the UAV wireless transceiver is off-platform interface. At the same time, the receiving platform can embed a network transmission module to transmit the signal to the central station .

Can integrated sensing and Communication Technology be used in unmanned aerial vehicles?

There has been a recent increase in the studies on integrated sensing and communication (ISAC) technology within unmanned aerial vehicles (UAVs). In our paper,

Principle of unmanned base station communication system

Advancing the Standards for Unmanned Air System ...

Abstract--Under NASA program NNA16BD84C, new architectures were identified and developed for supporting reliable and secure Communications, Navigation and ...

(PDF) Design of UAV wireless communication system

In addition, it explores the principles and implementation approaches of three types of UAV wireless communication systems, including a UAV wireless communication system, a ...

Physical Layer Security Communications and Path ...

I. INTRODUCTION Unmanned aerial vehicles (UAVs) have been widely researched for various applications in some specific situations such as communication, rescue, ...

Design of UAV wireless communication system

In addition, it explores the principles and implementation approaches of three types of UAV wireless communication systems, including a UAV wireless communication system, a UAV ...

Unmanned Aerial Vehicles Communication in 5G, 6G ...

Unmanned Aerial Vehicles Communication in 5G, 6G Networks Acknowledgement This overview text and analysis is compiled and structured, based on several public ...

Joint Communication and Positioning of UAV with Multiple Base Stations

It delves into UAV communication and location collaboration technology oriented towards base station sensing, with a primary focus on the communication-sensing issues of ...

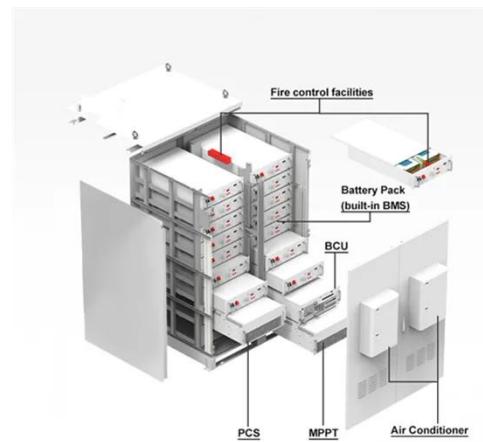

Optimal Positioning of Unmanned Aerial Vehicle (UAV) ...

Such UAV base stations (UAV-BSs) provide several advantages in providing cellular and network connectivity to the users [4]. The positioning of the UAV-base stations is ...

Optimal Positioning of Unmanned Aerial Vehicle (UAV) Base Stations

Such UAV base stations (UAV-BSs) provide several advantages in providing cellular and network connectivity to the users [4]. The positioning of the UAV-base stations is ...

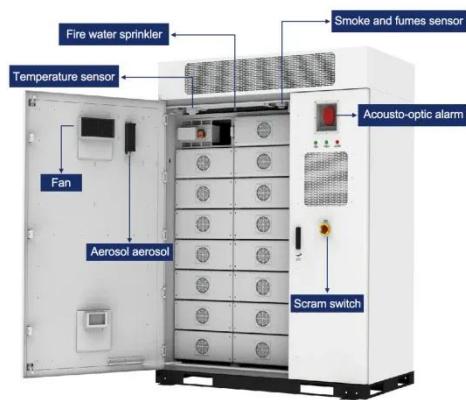

Aerial Base Station Placement: A Tutorial Introduction

The paper is concluded by discussing future research directions. Index Terms--UAV-assisted communications, aerial base stations, aerial base station placement. I. ...

Joint placement and communication optimization of uav base stations ...

There has been a recent increase in the studies on integrated sensing and communication (ISAC) technology within unmanned aerial vehicles (UAVs). In our paper, we ...

Communication and networking technologies for UAVs: A ...

A massive MIMO cellular system may use multiple antennas at a base station to mitigate the interference in a UAV communication system. In FD-MIMO transmission, the ...
