# Promotion of Automatic Folding Container for Drone Stations

**51.2V 150AH, 7.68KWH**

## Overview

---

Can docking stations extend drone power autonomy?

Abstract—Drones are increasingly operating autonomously, and the need for extending drone power autonomy is rapidly increasing. One of the most promising solutions to extend drone power autonomy is the use of docking stations to support both landing and recharging of the drone.

How to extend drone power autonomy?

One of the most promising solutions to extend drone power autonomy is the use of docking stations to support both landing and recharging of the drone. To this end, we introduce a novel wireless drone docking station with three commercial wireless charging modules.

How do autonomous drones work?

Autonomous drone operations using docking stations integrated into clothing, helmets, vehicles, etc. The drones can autonomously dock, charge, and transfer power wirelessly to the stations. They can also form groups to coordinate tasks and share functions. The stations have imaging sensors to guide drone docking.

What are drone landing stations with positioning systems?

On the other hand, drone landing stations with positioning systems can be divided into two main groups: with active and passive positioning. Active positioning systems include actuators and mechanisms to adjust the position and orientation of the drone to the right degree.
