Selection Guide for 350kW Folding Containers in Oil Refineries

Overview

Why are oil storage tanks important in the refining industry?

In the refining industry, oil storage tanks are indispensable for containing large volumes of flammable liquids within the oil supply chain. These units enable safe operation in production, transportation, distribution, and storage of strategic hydrocarbons.

What is a welded storage tank?

Small bolted or welded tanks might be ideal for production fields while larger, welded storage tanks are used in distribution terminals and refineries throughout the world. Product operating conditions, storage capacities, and specific design issues can affect the tank selection process. Storage tanks come in all sizes and shapes.

How to select material for refineries and onshore plants?

A table is included to summarize the material selection for refineries and onshore plants based on the fluid service and other process parameters. The chapter discusses considerations to select material in offshore such as pressure, temperature, weight, strength of material, and cost.

Where can I find information on petroleum refinery materials selection?

Further information on petroleum refinery materials selection can be found in the bibliography listed at the end of each chapter. Materials selection for centrifugal pumps is contained in API~ 610, Appendixes E and F. Another source of information is API's Guide for Inspection of Refinery Equipment, Chapter II.

Container Solutions for the Oil & Gas Industry - Flexible

Stationary container solutions form the backbone of many facilities in the oil and gas industry. They are used wherever permanent, high-performance, and secure infrastructures are required.

<i>LiFePO₄ Battery,safety</i>
<i>Wide temperature: -20~55°C</i>
<i>Modular design, easy to expand</i>
<i>The heating function is optional</i>
<i>Intelligent BMS</i>
<i>Cycle Life: ≥ 6000</i>
<i>Warranty: 10 years</i>
