# **Selling electricity and energy storage projects**

## Overview

---

How does energy storage make money?

Energy storage is shifting electricity, and it makes money from buying, selling, and trading the difference between low- and high-priced hours in the market. Storage assets therefore depend on price spreads, which tend to be higher with more imbalances. Imbalances, in return, are driven by more renewables.

How does energy storage work?

With energy storage, there's a new and interesting asset class emerging, and the business model is fundamentally different to that of wind and solar. Wind and solar assets generate revenues by selling electricity and therefore depend on the absolute level of electricity prices.

Are battery energy storage systems a good investment?

Battery Energy Storage Systems (BESS) provide operators with multiple avenues to generate revenue. These systems are not limited to a single function but can capitalise on various market opportunities, making them highly versatile investments.

Is energy storage a good investment?

Imbalances, in return, are driven by more renewables. Energy storage is therefore well-positioned for an electricity market dominated by renewables and represents an interesting new asset class. It's also a potential hedge for players who already have classic renewable portfolios.

## Selling electricity and energy storage projects

---

### Selling electricity plus energy storage

Storage as an equity asset: By deploying decentralized storage assets, electric power companies can help provide reliable, resilient, clean, and affordable electricity to low-income communities.
