Solar generator solar panels

Overview

What is a solar generator?

Solar generators are portable battery storage systems powered by solar panels. Unlike solar-plus-storage systems, solar generators are not designed to back up major appliances in the event of an outage. You can compare solar generators by assessing the watts and watt-hours of the systems, as well as their battery chemistries.

What is a portable solar generator?

Portable panels give you the ability to charge your solar generator when you need to and then pack it up for storage when you're on the go. These are often used for camping needs or for short-term use if there's a power outage and you need to charge your batteries up.

Are solar panels a generator?

Solar panels can't act as generators on their own – the electricity they generate needs to be stored somewhere. So, solar generators typically consist of two main products: solar panels and a battery storage system. When you place your solar panels out in the sun, they generate direct current (DC) electricity.

What is a solar backup generator?

Solar backup generators are commonly used at home. They're used in case there's a need for a secondary power source if the power goes out. They typically have a much higher AC output compared to portable solar generators. Some versions also can be paired with optional expansion batteries to store more solar power.
