# Solar greenhouse panels

## Overview

---

Can you put solar panels in a greenhouse?

Solar power is a great option for powering anything in your greenhouse that needs to use electricity. A greenhouse is designed with the goal of getting as much light for your plants as it possibly can, which means that it is a prime spot for solar panels. You can place these inside your greenhouse, whether on a bench or table or even on the floor.

Are all greenhouses solar-powered?

Technically, all greenhouses are solar-powered. The purpose of a greenhouse is to harness energy from the sun to help maintain the ideal temperature for plants to grow. However, with all the modern advances in solar power, we often think of “solar-powered” as only referring to energy produced using some sort of solar panels.

What is the difference between a solar greenhouse and solar panels?

The biggest differences are that a solar greenhouse: Is precisely aligned to capture as much as possible of the sun’s heat. Captures and converts the sun’s energy (into electricity) with solar panels. Enables you to store that converted energy for use in the greenhouse or elsewhere.
