### What is a solar inverter?

A solar inverter, or solar panel inverter, is a device that converts the direct current (DC) output of solar panels into alternating current (AC). Our homes and the electrical grid use AC power, so the inverter is essential for integrating solar energy into our daily use.

### What are the different types of solar inverters?

Different types of inverters serve various needs and setups. Let's explore the main types available. String inverters connect a series of solar panels, or a 'string,' to one inverter. The inverter then converts the combined DC power from these panels into AC power. String inverters are popular due to their cost-effectiveness and simplicity.

### Can a solar inverter power a home?

Without a solar inverter, you wouldn't be able to use those solar panels to power your home. A solar inverter's job is simple: It converts the direct current -- the electricity generated by your solar panels -- into alternating current electricity that your appliances run on.

### How does a solar inverter work?

A solar inverter's job is simple: It converts the direct current -- the electricity generated by your solar panels -- into alternating current electricity that your appliances run on. Selecting the right solar inverter for your home is tricky, but most solar installers usually handle the task, meaning you likely won't have much choice.
