## Overview

---

This article reviews the types of inverters (string, central converter, microinverter), selection criteria (MPPT, European efficiency, protection class, operating voltage range), and installation and ventilation requirements to extend the lifespan. How do I choose a solar inverter?

Solar inverters have a slightly higher DC power input capacity than their nominal AC output. This allows you to install an inverter with a nominal output below the nominal PV system size. To select the inverter, installers take the required PV system size and divide it by the DC to AC ratio of their preference, usually estimated between 1.2 – 1.35.

Should you install a solar inverter?

Whether you're opting for an on-grid, off-grid, or hybrid setup, a properly installed inverter ensures efficient power conversion and long-term performance. In this solar inverter installation guide, we walk you through everything you need to know — from site selection and wiring to safety checks and final setup.

What does a solar inverter do?

A solar inverter converts the direct current (DC) electricity generated by your solar panels into alternating current (AC), which is used to power household appliances. It also manages power flow between your solar system, grid connection, and any backup batteries (in case of hybrid or off-grid systems).  
1. Site Selection.

How long does it take to install a solar inverter?

Most inverters perform best in a cool, shaded environment. How long does it take to install a home solar inverter?

Installation time varies by system size but generally takes 4-8 hours. A basic on-grid residential setup can often be completed within a single day.

-  Efficient Higher Revenue
  - Max. Efficiency 97.5%
  - Max. PV Input Voltage 600V
  - 150W Peak Output Power
  - 2 MPP Trackers, 150% DC Input Oversizing
  - Max. PV Input Current 15A, Compatible with High Power Modules
-  Intelligent Simple O&M
  - IP65 Protection Degree support outdoor installation
  - Smart I-V Curve Diagnosis Function: locate PV string faults accurately and automatically detect faults
  - DC+AC Type II SPD: prevent lightning damage
  - Battery Reverse Connection Protection
-  Flexible Abundant Configuration
  - Plug & Play, EPS Switching Under 10ms
  - Compatible with Lead-acid and Lithium Batteries
  - Max. 6 Units Inverters Parallel
  - AFCI Function (Optional): when an arc-fault is detected the inverter immediately stops operation
