# **Solar mobile charging system in Rotterdam the Netherlands**

## Overview

---

How many connected charging stations are there in Rotterdam?

In the Rotterdam region, over 13.000 connected charging stations are helping to balance the power grid. With its SMATCH smart-charging solution, ENGIE Laborelec is providing the brains behind what is arguably the biggest smart-charging site in the world.

Where can EV charging solutions be deployed in the Netherlands?

Wallbox and PowerGo are collaborating to deploy EV charging solutions across hotels in the Netherlands. The project includes the installation of Wallbox's Em4 AC chargers and Supernova DC fast chargers. Initial installations are now operational at the Mercure Amsterdam City and Novotel Amsterdam City.

Are Rotterdam charge centres smart?

The Rotterdam charge centres are smart because the software will ensure that the available power is divided among the electric cars connected to the charge points. When few electric cars are connected and high amounts of green power are available (e.g. due to sun or wind), maximum charging can take place. Smart big data analysis is crucial here.

Why should Rotterdam have a charging network?

The residents, visitors, and companies of Rotterdam must have sufficient charging options that are aligned with their usage, in a location that is logical at users' destination or along their route. The charging network must anticipate the transition and be sufficiently flexible to scale up when demand for zero emission mobility grows.
