Solar panels solar power generation payback

Overview

This average recovery time, called the solar panel payback period, typically ranges from six to 10 years, depending on a handful of factors. What is a solar panel payback period?

The solar panel payback period denotes the time it takes to recoup the initial investment in a solar system through energy savings or income generation. It represents the breakeven point for your investment. Determining the ROI and payback period involves meticulous calculation. Here's how to do it:

How do I calculate my solar payback period?

To calculate your solar payback period, divide your combined costs by your annual savings. With tax credit: Combined costs (\$18,552) ÷ annual savings (\$2,613) = solar payback period (7.1 years) Without tax credit: Combined costs (\$27,360) ÷ annual savings (\$2,613) = solar payback period (10.5 years).

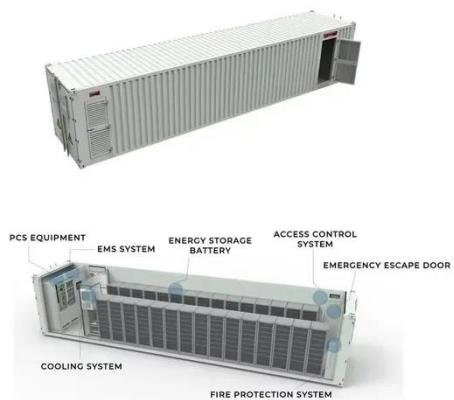

Will solar pay back in 2026?

With the 30% federal solar tax credit ending December, payback periods will increase by an average of 43% starting in 2026. This means if you're considering solar, installing it now rather than later will save you around \$9,000 and allow you to earn back your investment more than four years sooner.

How do solar energy costs affect your return on investment?

Specific energy costs in your area also directly impact your return on investment (ROI) from your solar power system. The higher your monthly electricity bill, the more quickly you tend to recoup your investment because it shortens your payback period.

Solar panels solar power generation payback

Solar payback period: How soon will it pay off?

Learn how to calculate your solar panel payback period, the metric that most solar shoppers rely on to understand the value of solar.

How Long Is The Payback Period for Solar in California?
