Solar sun room with glass room

Overview

What type of glass is used to build a sunroom?

This will give you a better idea of what type of glass is being used to build your room. A truly insulated sunroom is built using double-pane glass - never single pane glass. Between the layers of glass is usually an inert gas such as Argon, which provides a barrier to insulate the room from outside temperatures.

What are some sun room ideas?

Some sun rooms ideas boast of large floor to ceiling picture windows, but this one boasts of windows which goes up to the ceiling, creating a small greenhouse-like space. Inside, it is kept simple and minimal, with off white walls and a set of metal cafe chairs with a round glass table.

Does sunroom glass need to be insulated?

The structure or frame that holds your sunroom glass should be "thermally broken," meaning that there is a material that insulates the inside part of the frame from the outside within the frame's structure. It is important to ask how your sunroom glass is insulated and know the replacement policy in case a pane fails.

What is a solar room?

The solar was a room in many English and French medieval manor houses, great houses and castles, mostly on an upper storey, designed as the family's private living and sleeping quarters. Within castles they are often called the "Lords' and Ladies' Chamber" or the "Great Chamber".
