### What are supercapacitors & EDLC?

Supercapacitors, also known as ultracapacitors and electric double layer capacitors (EDLC), are capacitors with capacitance values greater than any other capacitor type available today. Supercapacitors are breakthrough energy storage and delivery devices that offer millions of times more capacitance than traditional capacitors.

### What is the maximum capacitance a supercapacitor can provide?

The maximum capacitance that these capacitors can provide is 1 Farad. If the higher capacitance is required, the capacitors will need to be quite large, which may or may not fit into typical electronic circuits. Enter the supercapacitor.

### What are Supercapacitors made of?

The use of activated carbon as electrodes and a minimum distance between electrodes enable these capacitors to store a vast amount of charge in small size. Supercapacitors are constructed somewhat like electrolyte capacitors. They have two electrodes that are made up of porous active carbon coating or carbon nanotubes.

### What is supercapacitor technology?

Supercapacitor technology has received a lot of funding in the last few years because it has the potential to drastically alter the energy storage business. A supercapacitor differs from other types of capacitors due to its large surface area and thin dielectric layer between the electrodes.
