# **The power generation of a solar panel**

## Overview

---

Can you use a generator if you have solar panels?

Fossil fuel-powered generators can work independently of solar panels to give you backup power. However, solar batteries (and solar generators) are a good alternative if you prefer to stick with green energy. Why would you need a generator if you have solar panels?

Can a solar battery power a generator?

Plus, a battery can keep your solar panels running when the grid is down - something a generator cannot do. You can maximize your home's resilience against power outages by installing both a solar battery and a standby generator. Much like with solar panels, a generator and battery cannot power your home at the same time.

Can a generator run a home with solar power?

Here's the deal - even if you have a standby generator hooked up to your home, your solar panels aren't going to turn on when the grid is down. Unfortunately, you cannot run your home with both solar power and generator power at the same time. In other words, the generator and the solar panels cannot operate parallel to one another.

## Understanding Solar Photovoltaic (PV) Power Generation

Grid-Connected PV Systems Off-Grid (Stand-Alone) PV Systems Solar Panels Solar Arrays Construction and Mounting PV Combiner Boxes PV Inverters PV Disconnects An inverter is a device that receives DC power and converts it to AC power. PV inverters serve three basic functions: they convert DC power from the PV panels to AC power, they ensure that the AC frequency produced remains at 60 cycles per second, and they minimize voltage fluctuations. The most common PV inverters are micro-inverters, string inverters. See more on [eepower solar clue](#)
