There is a mobile power signal base station in Montenegro

Overview

When will 5G be available in Montenegro?

The awarded operators are obliged to make available 5G service in every municipality in Montenegro by the end of 2024, to cover at least 50% of the total population of Montenegro by 5G by the end of 2026, and to provide a continuous network signal coverage of all populated places, highways, and main roads by the end of 2030.

What is a mobile phone base station?

A mobile phone base station provides coverage to a geographic area known as a "cell". Cells are aligned next to each other in a similar pattern to a honeycomb, and it is for this reason that mobile phone networks are sometimes referred to as "cellular" networks.

What is a base station?

It is a fixed location equipped with antennas and other equipment that receives and transmits radio signals to and from mobile devices, such as smartphones, tablets, and other wireless devices. Base stations are an essential component of cellular networks, providing coverage and connectivity to mobile devices within a specific area or cell.

How does a mobile phone connect to a base station?

The first step in the process is for the phone to check that there is coverage in the area that the call is made. Once the phone has verified that there is sufficient signal strength to make the call, the phone establishes a connection with a nearby mobile phone base station.
