Overview

What is an off-grid Solar System?

An off-grid solar system, also known as off-the-grid or standalone, is a photovoltaic system that has no access to the utility grid. For this reason, off-grid solar systems involve both solar panels and battery storage, so the power can be coming to the building from either of these two sources at any given time — depending on the solar situation.

What is an off-grid solar inverter?

* Superior safety & protection. Technical specifications for off-grid three-phase inverter 100KW 120kw 150kw 200kw The heart of the off-grid three-phase solar system is the three-phase inverter. The inverter converts the DC power from the battery bank into AC (alternating current) power, which is compatible with three-phase electrical systems.

How long does a solar inverter last?

A: Yes, 18 months for inverter and inverter-related products including solar generators, and solar inverters, 2 years for three-phase inverter and MPPT controller, 10 years for solar panels, and 2 years for solar lights. Inverter is a necessary unit for the off-grid power system or backup power system.

How much solar power does Vietnam have?

Statistics released in late 2020 reveal that Vietnam's solar capacity stood at over 7.4 Gigawatts. This is positively surprising considering that the country's solar capacity was only 4 megawatts in 2015. The figure below will help paint a clear picture of Vietnam's exponential growth in matters concerning solar energy;
