# **What are the maintenance-free batteries for base stations**

## Overview

---

What makes a maintenance-free battery a good choice?

Maintenance-free batteries are a good choice due to their use of a calcium alloy of lead instead of an antimony alloy, which allows them to sustain the water longer without refilling compared to traditional batteries. However, they are not maintenance-free forever, and any abnormal electrical system condition or high ambient temperatures may cause more water to evaporate than normal.

Which battery is best for telecom base station backup power?

Among various battery technologies, Lithium Iron Phosphate (LiFePO<sub>4</sub>) batteries stand out as the ideal choice for telecom base station backup power due to their high safety, long lifespan, and excellent thermal stability.

What is a maintenance-free lead-acid battery?

Uninterruptible Power Supplies (UPS): Maintenance-free lead-acid batteries are widely used in UPS systems for data centers, hospitals, telecommunications, and other critical infrastructure. These systems require reliable, long-lasting batteries that can deliver power during outages, and maintenance-free lead-acid batteries fit this role perfectly.

Are maintenance-free lead-acid batteries better than flooded batteries?

Longer Shelf Life: By preventing electrolyte loss and reducing the likelihood of sulfation, maintenance-free lead-acid batteries can often last longer than traditional flooded batteries, making them more cost-effective in the long run.

3. Commercial Applications of Maintenance-Free Lead-Acid Batteries
