# **What is the voltage of solar container lithium battery for electric tools**

## Overview

---

Every solar system owner should understand how their system works. Looking at a lithium ion battery voltage chart is a great place to start.

What voltage is a solar battery?

Solar batteries are typically 12V, 24V, or 48V, with a fully charged 12V battery reading between 12.6V and 12.8V. Voltage readings below 12.4V for a 12V battery indicate a partially discharged state that may require recharging.

Are lithium ion batteries good for solar storage?

Lithium-ion batteries are popular for solar storage due to their high energy density, long lifespan, and decreasing cost. There are several types of lithium-ion batteries, but two types are the most commonly used for solar storage: lithium iron phosphate (LFP) and nickel manganese cobalt (NMC).

Can solar panels charge lithium batteries?

While solar panels are able to charge lithium batteries, solar charge controllers are required. An MPPT (Maximum Power Point Tracking) solar charge controller is an example of a solar charge controller that allows more current into the battery, leading to faster battery charging.

What are the different voltage sizes of lithium batteries?

There are different voltage sizes of lithium batteries with the most popular being 12 volts, 24 volts, and 48 volts. Each one has a different voltage rating at a specific discharge capacity. It is also beneficial to understand the voltage and discharge rate of a 1-cell lithium battery.
