## Overview

---

What is a 7.4 volt battery?

Part 1. What is a 7.4 V battery?

A 7.4V battery is a rechargeable lithium-based power source, typically configured as a 2-cell (2S) lithium polymer (LiPo) or lithium-ion (Li-ion) pack, with each cell providing a nominal voltage of 3.7V, totaling 7.4V when combined in series.

What is a 7.4v Li-ion battery?

A 7.4V Li-ion battery is also a rechargeable battery that uses lithium-ion chemistry. Li-ion batteries are similar to LiPo in voltage and capacity but have a more rigid, cylindrical shape. The 7.4V nominal voltage is typically achieved by connecting two 3.7V Li-ion cells in series.

What is a 7.4v LiPo battery?

A 7.4V LiPo battery is a specific type of rechargeable battery that uses lithium-polymer chemistry. LiPo batteries are known for their high energy density, compact size, and flexibility in shape. The 7.4V nominal voltage is typically achieved by connecting two 3.7V LiPo cells in series.

What is a 3.7V battery used for?

3.7V batteries are commonly used in small, portable electronic devices like smartphones, cameras, and vaping devices. 7.4V batteries are often used in larger, power-hungry devices like power tools, drones, and some RC vehicles, where the higher voltage and energy capacity are beneficial.
